

S/N	Date	Country, Disaster Log and Key Updates
1	09 Apr 2019	Philippines, Storm in Tacurong City http://adinet.ahacentre.org/reports/view/1426
2	10 Apr 2019	Indonesia, Flooding in Indramayu Regency http://adinet.ahacentre.org/reports/view/1424
3	12 Apr 2019	Indonesia, M6.8 Earthquake in Central Sulawesi http://adinet.ahacentre.org/reports/view/1425

Regional Summary (Week 15)

- Scattered rain showers has been observed in the equatorial, southern ASEAN region, the Philippines, and some portions of the Mekong sub-region. However, smoke haze continued to be observed in the northern Mekong sub-region, specifically in northern Thailand, northern Lao PDR, and eastern Myanmar. Transboundary Smoke Haze Alert Level 3 is still raised over the northern Mekong sub-region.
- Seismically, the region was active with 16 recorded earthquakes of magnitude 5.0 and above. All of these happened across Indonesia. The strongest earthquake is a M6.8, with it's epicentre near Banggai Islands in Central Sulawesi. This prompted authorities to raise a tsunami alert. Residents surrounding the area evacuated to higher grounds. Fortunately, not much impact resulted from the strong quake. Just September last year, a M6.8 earthquake hit Palu in the other side of Central Sulawesi, resulting to major damages.
- The ASEAN Specialised Meteorological Centre ([ASMC](#)) expects continuity of scattered rain showers in most of the region; with the exemption of the northern Mekong sub-region, which is forecasted to experience a generally dry weather with hotspots and hazy conditions.
- The reported disasters were within the coping capacity of the respective member states.

REGIONAL TALLY

# Affected population:	# Affected families:	# Displaced:
18,144*	4,723*	14,030*

*AHA Centre's estimation based on total number of deaths, injuries, affected population, and IDPs reported/confirmed by National Disaster Management Offices (NDMOs) of each ASEAN Member State and other verified sources.
