Indonesia

- High intensity rainfall in Bolaang Mongondow Regency on 24 Jul 2020 01:00 WIB as well as the overflowing of the Salongo, Molibagu, and Tolondadu rivers (including several others) caused flooding in Bolaang Uki, Tomino, and Helumo sub-districts according to Indonesia's Badan Nasional Penanggulangan Bencana ([BNPB](#)).
- Indonesia's Badan Meteorologi Klimatologi dan Geofisika ([BMKG](#)) has issued early warning information regarding moderate to heavy rain intensity potential for the Kotamobagu, Bolsong, Bolsel, Boltim, and Bolmut areas in North Sulawesi today 24 Jul 2020.
- According to [BNPB](#), as of 24 Jul 2020 09:00 WIB, it is estimated that **18.847 households** and **18.847 housing units** have been affected. Some victims have also been displaced and have sought refuge in the village halls (data collection is still being conducted).
- Current efforts of the BPBD Kab. Bolaang Mongondow Selatan include the conducting of rapid assessment, evacuation of victims, and coordination with relevant agencies.
- The BPBD together with the Office of Social Affairs is preparing the establishment of refugee camps for those affected by the floods.
- The AHA Centre shall continue to monitor the situation for further developments and provide necessary updates.
